Criteria for acceptance of innovation firm: inonvative business plan

Description of the park

Introduction

The Progress Technology Park is located directly in the area of the Holešov Strategic Industrial Zone. The Park significantly extends the offer of all the Zone by being oriented at the incipient businessmen or other subjects with innovative potential. The project intends to support those for whom the purchase of a plot and construction of their own premises might be a considerable barrier for starting their business. These companies can find different facilities and services in the Progress TechnologyPark. Moreover as a part of their own development they can be included among the investors in the Holešov Strategic Industrial Zone. A larger part of the Progress Technology Park consists of two universal halls, that offer premises for production. Among others there are also offices, laboratories and background disposal in the halls. Production and other premises are in this case intended for innovatively oriented companies with a significant potential of growth. Prevalent client is supposed to be a company with a short history, that disposes of unique technologies or know-how, but at the moment cannot afford its own grounds for construction. The Business Incubator is situated in the third building that is designed as an administrative one. In the business incubator the lease is preferential and some of the services are subsidized. This support is decreasing over time; the aim is a gradual adaptation to the market conditions.
